Substations	4	9	22	0	0	80	9	53	123	0	36	0	(17)	319

¹ One powerplant divides its generation between two projects.

² In accordance with Maintenance Business Rule 3.18, substations can be shared by up to three power systems. The eliminations column removes the duplicates.

³ These values includes total transmission, building, communication and substation acreage for each power system.

Revenue Profile as of Sept. 30, 2015

Power revenues	Boulder Canyon	Central Arizona	Central Valley	Falcon-Amistad	Loveland Area Projects	Parker-Davis	Pick-Sloan Missouri Basin Program—Eastern Division	Provo River	Salt Lake City Area/Integrated Projects	Washoe	Eliminations ¹	Western total
Number of customers	15	21	103	1	79	36	335	3	156	1	(69)	681
Long-term power revenues	61,006,047	0	227,965,455	6,649,680	84,439,065	11,601,435	319,390,118	208,718	145,857,275	78,936	0	857,196,729

Other power revenues	0	63,068,082	5,827,242	0	2,764,155	0	63,466,549	0	27,311,486	0	0	162,437,514
Project-use power revenues	0	0	23,400,000	0	26,814	1,848,273	213,552	0	2,278,083	0	0	27,766,722
Interproject power revenues	0	215,802	0	0	4,533,117	0	0	0	967,850	0	0	5,716,769
Total power revenues (\$)	61,006,047	63,283,884	257,192,697	6,649,680	91,763,151	13,449,708	383,070,219	208,718	190,953,588	78,936	0	1,067,656,629

¹ Double counting occurs when more than one project sells power to the same customer. The eliminations column removes the duplicates.

FACILITIES

Buildings, Communications Summary

Project	Number of buildings	Number of communications sites	Fee area		Easement area	
			Acres	Hectares	Acres	Hectares
Boulder Canyon	0	3	0	0	0	0
Central Arizona ¹	2	10	0	0	0	0
Central Valley	39	19	0	0	0	0
Loveland Area Projects	191	116	57	23	46	19
Pacific NW-SW Intertie	14	10	0	0	0	0
Parker-Davis	58	63	0	0	7	3
Pick-Sloan Missouri Basin Program—Eastern Division	185	208	183	74	176	71
Salt Lake City Area/Integrated Projects	72	68	46	18	1	0
Subtotal	561	497	286	115	230	93
Eliminations ²	0	(20)	0	0	0	0
Western total	561	477	286	115	230	93

¹ Western maintains an additional seven communication sites owned by the Bureau of Reclamation.

² In accordance with Maintenance Business Rule 3.18, communication sites can be shared by up to three power systems. The eliminations row removes the duplicates.

Substations Summary

Project	Number of substations ¹	Transformers		Fee area		Withdrawal area ²		Easement area	
		Number	Capacity (kVA)	Acres	Hectares	Acres	Hectares	Acres	Hectares
Boulder Canyon	4	0	0	0	0	0	0	0	0
Central Arizona ^{1,3}	9	2	60,000	0	0	0	0	0	0
Central Valley	22	21	1,379,760	374	151	0	0	0	0
Electrical District 5-to-Palo Verde Hub	0	1	375,000	0	0	0	0	0	0
Loveland Area	80	73	3,490,710	530	215	0	0	163	66
Pacific NW-SW Intertie	9	8	5,821,320	316	128	4,403	1,782	86	35
Parker-Davis	53	30	2,233,000	363	147	115	47	87	35
Pick-Sloan Missouri Basin Program—Eastern Division	123	120	10,051,960	2,006	812	23	9	9	4
Salt Lake City Area/Integrated Projects	36	35	6,724,250	748	303	128	52	50	20
Subtotal	336	290	30,136,000	4,337	1,756	4,669	1,890	395	160
Eliminations ¹	(17)	0	0	0	0	0	0	0	0
Western total	319	290	30,136,000	4,337	1,756	4,669	1,890	395	160

¹ In accordance with Maintenance Business Rule 3.18, substations can be shared by up to three power systems. The eliminations row removes the duplicates.

² Areas that have been set aside by the Bureau of Land Management for Western transmission and substation use.

³ Western maintains an additional six substations owned by the Bureau of Reclamation.

TRANSMISSION LINES

Transmission Line Summary (in circuit miles)

Interproject sales	276	349
Other deliveries/losses ⁴	620	3,603
Other total	896	3,952
Energy delivered total⁵	32,019	36,082
System and contractual losses ⁶	3,932	1,774
Energy disposition total	35,951	37,856

¹ Parker-Davis includes 5 GWh of interchange delivered to Western Area Lower Colorado. Loveland Area Projects includes 398 GWh energy returned from customers for pump storage.

² Central Arizona includes 1,092 GWh sales of Navajo Surplus Energy in excess of Central Arizona load. Salt Lake City Area/Integrated Projects classifies 432 GWh of Western Replacement Power as pass-through cost sales in the sales and revenue table, so it is not included in this table.

³ Central Arizona load residing in Western Area Lower Colorado Balancing Authority as of Oct. 1, 2011. Desert Southwest region does not bill or collect for Central Arizona project-use sales.

⁴ Includes 108 GWh used for pumping, pumping generation schedules (customers' use of pump storage) and Colorado-Big Thompson project pumping. Also includes 2,747 GWh of project-use energy provided by the Central Arizona Water Conservation District per Western's agreement 11-DSR-12296 with the Bureau of Reclamation. The revenues are billed by Reclamation and are neither included in the sales and revenues tables in the Statistical Appendix nor the Annual Report. The energy is included in Western's net generation as it passes through Western's balancing authority, but the energy is not recorded as a sale of energy in the sales and revenues tables per the Statistical Appendix.

⁵ Pick-Sloan Missouri Basin Program—Eastern Division includes Joint Marketing Plan Sales of 439,227 MWh and \$5,979,712 for FY 2015. Boulder Canyon energy does not match energy sales that are billed on master schedule (estimated) deliveries not actuals.

⁶ Loveland Area Project includes system and contractual losses of -316 GWh. These values are due to over/underdeliveries by others in the balancing authority area causing energy imbalance.

Capability and Net Generation by Project

Project	Number of units	Installed capacity ¹ FY 2015 (MW)	Actual operating capability (MW) ²		Net generation (GWh)	
			July 1, 2015	July 1, 2014	FY 2015	FY 2014
Boulder Canyon	19	2,074	1,553	1,493	3,582	3,895
Central Arizona	3	574	547	547	3,839	4,423
Central Valley	38	2,112	1,141	1,229	2,495	2,867
Falcon-Amistad	5	98	98	58	52	117
Loveland Area Projects	39	830	760	747	1,852	2,160
Parker-Davis	9	315	315	316	1,341	1,399
Pick-Sloan Missouri Basin Program—Eastern Division	41	2,675	2,205	2,630	9,996	9,520
Provo River	2	5	5	5	22	18
Salt Lake City Area/Integrated Projects	24	1,816	1,470	1,047	5,263	4,198
Washoe	2	4	3	3	3	10
Total	182	10,503	8,097	8,075	28,445	28,607

¹ Installed operating capability is the maximum generating capability of the units' at-unity power factor without exceeding the specified heat rise on each unit and is independent of water constraints.

² Actual operating capability represents the operating capability on July 1, but may not represent the coincident or non-coincident peak operating capability for the powerplant, project or Western as a whole.

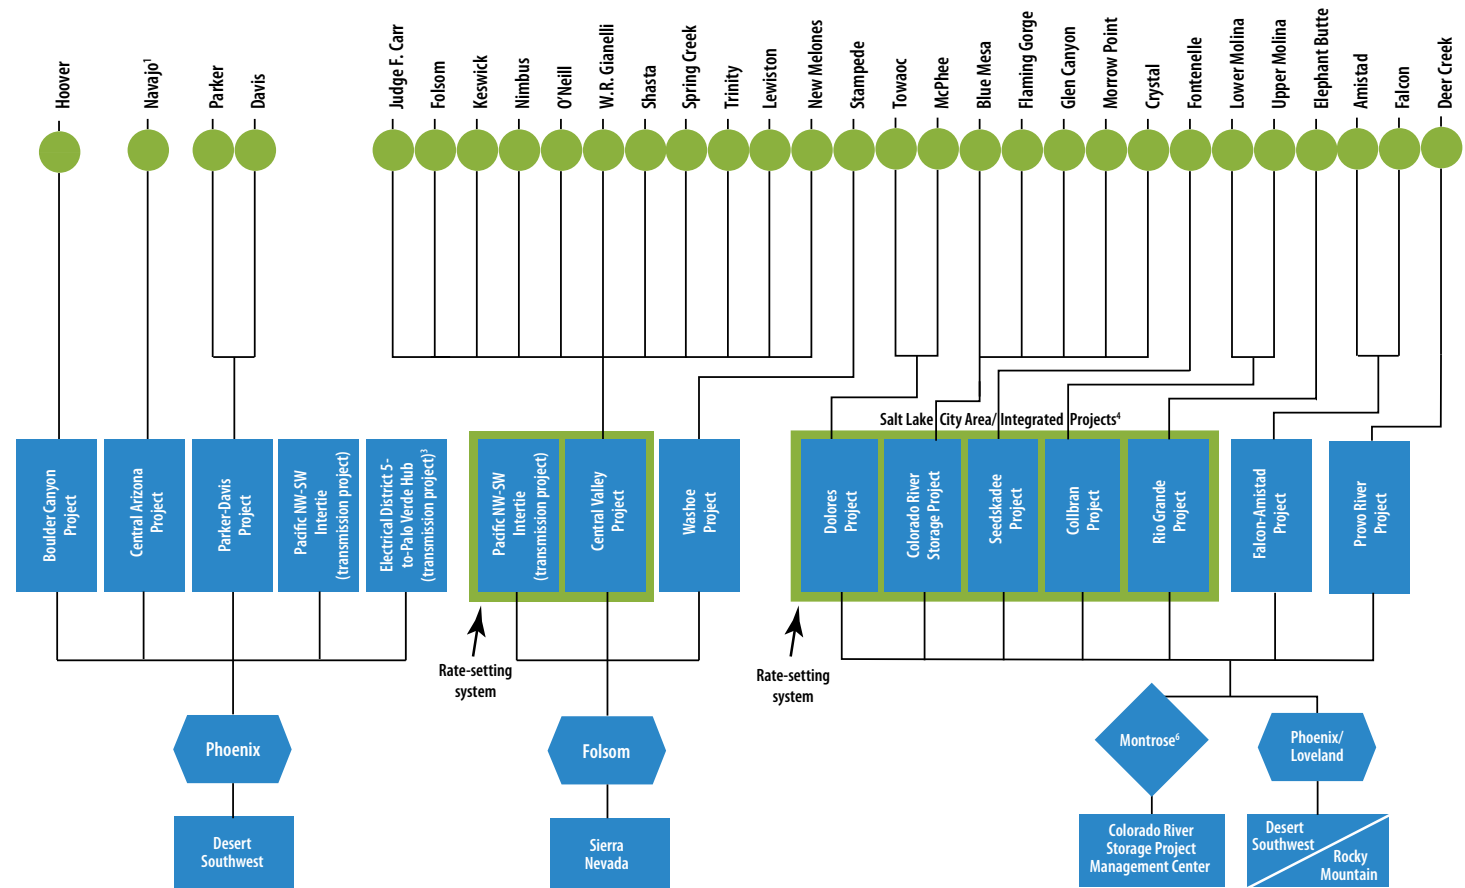

Capability and Net Generation by State

Project	Number of units	Installed capacity ¹ FY 2015 (MW)	Actual operating capability (MW) ²		Net generation (GWh)	
			July 1, 2015	July 1, 2014	FY 2015	FY 2014
Arizona	25	3,186	1,792	2,223	8,829	10,653
California	44	2,176	1,204	1,292	2,713	3,103
Colorado	22	723	716	645	1,480	1,537
Montana	12	485	518	511	1,910	2,112
Nevada	10	1,037	1,553	747	3,582	1,948
New Mexico	3	28	16	8	38	13
North Dakota	5	583	450	565	2,268	2,357
South Dakota	26	1,732	1,345	1,662	6,214	5,559
Texas	5	98	98	58	52	117
Utah	5	157	157	83	526	380
Wyoming	25	298	248	281	833	828
Total	182	10,503	8,097	8,075	28,445	28,607

¹ Installed operating capability is the maximum generating capability of the units' at-unity power factor without exceeding the specified heat rise on each unit and is independent of water constraints.

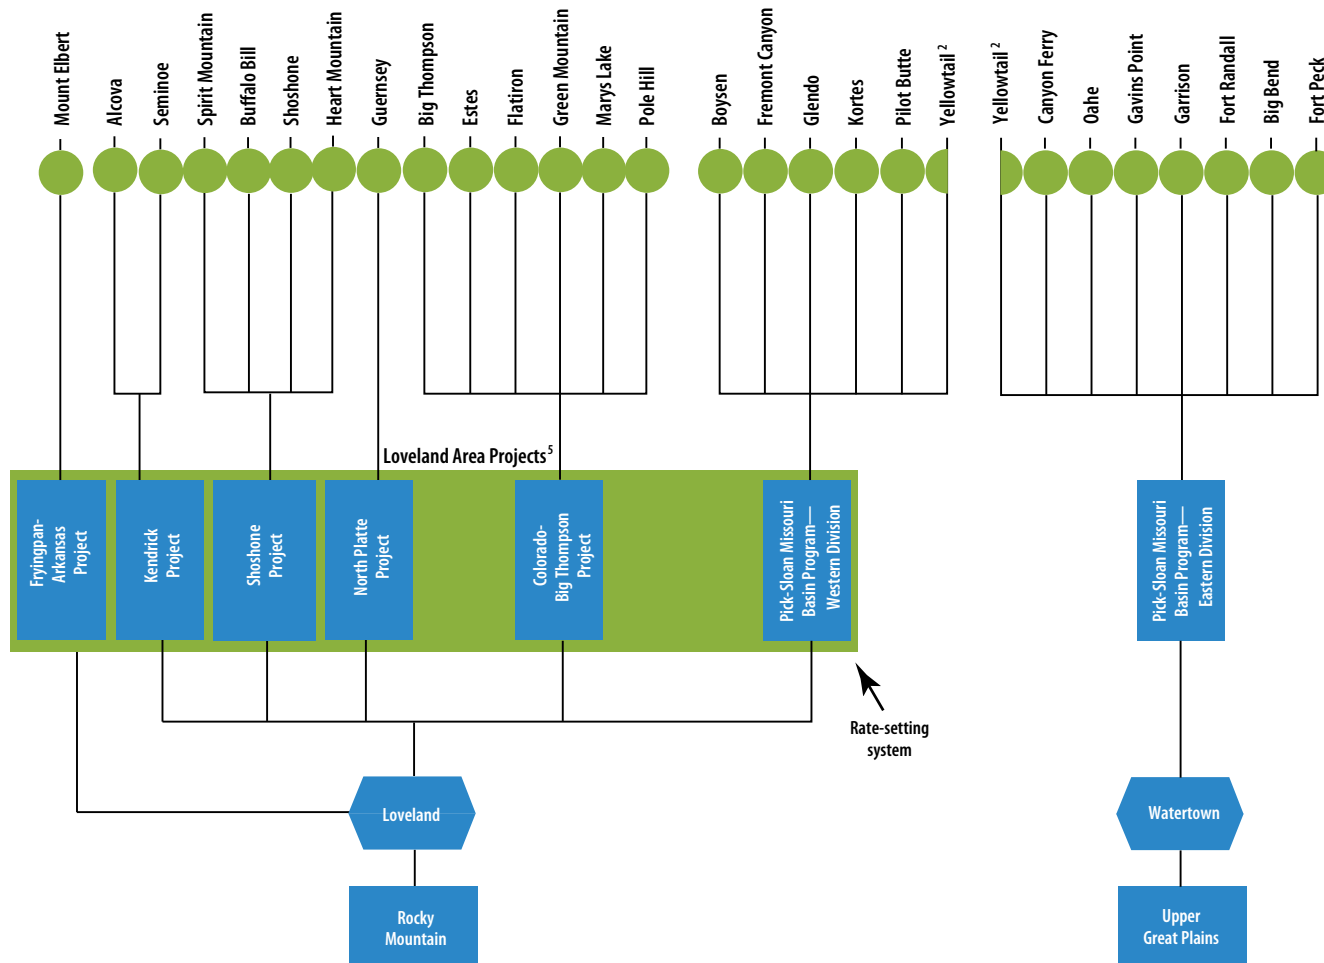

² Actual operating capability represents the operating capability on July 1, but may not represent the coincident or non-coincident peak operating capability for the powerplant, project or Western as a whole.

POWER MARKETING SYSTEM

-  Power resources
-  Project or power system
-  Balancing authority (dispatch center)
-  Billing/marketing office
-  Rate-setting system
-  Colorado River Storage Project Energy Marketing and Management Office

POWER MARKETING SYSTEM

¹ Coal-fired generation

² Generation from Units 1 and 2 is marketed by the Rocky Mountain region; generation from Units 3 and 4 is marketed by the Upper Great Plains region. Yellowtail is controlled by Rocky Mountain.

³ The facility-use charge for the Electrical District 5-to-Palo Verde Hub transmission project provides the sole source of revenue for repayment of the project.

⁴ These resources are integrated for marketing and operation purposes.

⁵ These resources are integrated for marketing and operation purposes. However, the Colorado-Big Thompson, Kendrick, North Platte and Shoshone projects, as well as the Pick-Sloan Missouri Basin Program (Eastern and Western divisions), are integrated for repayment purposes.

⁶ Power marketed from Salt Lake City Area/Integrated Projects resources and Loveland Area Projects.

¹ Installed operating capability is the maximum generating capacity of the units' at-unity power factor without exceeding the specified heat rise on each unit and is independent of water constraints.

² Actual operating capability represents the operating capability on July 1, but may not represent the coincident or non-coincident peak operating capability for the powerplant, project or Western as a whole.

³ Net generation is gross plant generation less plant use. These amounts have not been reduced by other priorities such as project pumping energy.

⁴ Excludes 4.8 MW reserved for plant use but included in number of units.

⁵ Coal-fired powerplant.

⁶ United States' share (24.3 percent) of 2,250 MW plant capacity.

⁷ Pump/generating plant.

⁸ Station service units' capacity is not included.

⁹ United States' share (47.67 percent) of plant capacity.

¹⁰ United States' share (50 percent) of plant capacity.

¹¹ Actual operating capability is based on average hourly generation for the month.

¹² Only Unit 3 has pump/generation capability.

¹³ RM and UGP each market half of the plant capacity and energy.

¹⁴ Normal sustained maximum capacity of each unit is 62.5 MW, but units may be evaluated for higher output on a case-by-case basis.

¹⁵ Plant mothballed due to repair cost but not decommissioned.

Operating agencies:

Reclamation - Bureau of Reclamation, Department of the Interior

CDWR - California Department of Water Resources

IBWC - International Boundary and Water Commission, Department of State

PRWUA - Provo River Water Users Association

SRP - Salt River Project

HISTORICAL FLOWS

Annual Flow to Trinity, Shasta, Folsom and New Melones Reservoirs

(in million acre-feet)

PEAK FIRM LOADS

These graphs show monthly regional coincident peak firm loads, except that Sierra Nevada loads may not be coincident with the load-management loads. Amounts for Desert Southwest and Rocky Mountain regions exclude Salt Lake City Area/Integrated Projects loads. They are included in the Colorado River Storage Project Management Center amounts.

Our FY 2015 coincident firm and contingent peak load was 5,368 MW. The peak occurred on June 30, 2015.

POWER SALES

Transmission Services Revenues by Project^{1,2}

Project	FY 2015	FY 2014
	Revenues (\$)	Revenues (\$)
Central Arizona	5,069,946	5,035,369
Central Valley	35,058,684	34,479,465
Electrical District 5-to-Palo Verde Hub	2,173,944	N/A ³
Loveland Area Projects	46,784,345	50,160,003
Pacific NW-SW Intertie Project	33,203,784	32,593,498
Parker-Davis	42,073,602	43,325,746
Pick-Sloan Missouri Basin Program—Eastern Division	64,358,805	63,846,692
Salt Lake City Area/Integrated Projects	17,454,611	15,786,065
Western total	246,177,721	245,226,838

¹ Transmission services revenues as presented in this table are \$116.0 million less than the FY 2015 transmission and other operating revenues presented in the combined power system statements of revenues and expenses and accumulated net revenues due to the following: -\$1.4 million in reconciling items as explained in Footnote 2 below, \$38.2 million presented separately in the Ancillary Services Revenues table; -\$4.9 million in ancillary services revenue reconciling items as explained in Footnote 2 to the Ancillary Services Revenues table; \$57.4 million in other revenues excluded from the revenue tables and explained in Footnote 3 to the Ancillary Services Revenues table; \$8.7 million in eliminations; \$22.7 million in other revenues earned by the generating agencies; and other miscellaneous minor transactions.

² Reconciling items for transmission services revenues total -\$1.4 million and consist of the following: -\$0.7 million in reliability sales; -\$6.8 million in transmission losses; \$5.2 million in Central Arizona revenues classified as other activities in Western's FY 2015 Annual Report; \$2.2 million in Electrical District 5 revenues classified as Transmission Infrastructure Program activities in Western's FY 2015 Annual Report; and -\$1.3 million in variances between transmission revenue accrual estimates and actual transmission revenues.

³ Project was not operational in Fiscal Year 2014.

Ancillary Services Revenues by Project^{1,2,3}

Project	FY 2015	FY 2014
	Revenues (\$)	Revenues (\$)
Boulder Canyon	960,355	1,005,040
Central Arizona	83,887	88,671
Central Valley	2,634,136	2,348,788
Loveland Area Projects	22,976,349	17,545,045
Pacific NW-SW Intertie Project	264,648	198,404
Parker-Davis	478,826	374,706
Pick-Sloan Missouri Basin Program—Eastern Division	4,434,540	5,060,492
Salt Lake City Area/Integrated Projects	6,398,434	5,882,408
Total Western	38,231,175	32,503,554

¹ Ancillary services revenues as presented in this table are \$323.9 million less than the FY 2015 transmission and other operating revenues presented in the combined power system statements of revenues and expenses and accumulated net revenues due to the following: -\$4.9 million in reconciling items as explained in Footnote 2 below; \$246.2 million presented separately in the Transmission Services Revenues table; -\$1.4 million in transmission services revenue reconciling items as explained in Footnote 2 to the Transmission Services Revenues table; \$57.4 million in other revenues excluded from the revenue tables and explained in Footnote 2; \$8.7 million in eliminations; \$22.7 million in other revenues earned by the generating agencies; and other miscellaneous minor transactions.

² Reconciling items for transmission services revenues total -\$4.9 million and consist of the following: -\$5.0 million in variances between ancillary services revenue accrual estimates and actual ancillary services revenues; and \$0.1 million in Central Arizona revenues classified as other activities in Western's FY 2015 Annual Report.

³ Other revenues as excluded from the revenue tables total \$57.4 million and consist of the following: \$40.8 million in California Independent System Operator and resource adequacy; \$7.8 million in reimbursable work; \$7.9 million in rental income; \$0.6 million in late charges; \$57,000 in sales of scrap/surplus power; \$2.2 million in support services; -\$7.9 million in Central Arizona revenues classified as other activities in Western's FY 2015 Annual Report; and \$6.0 million in other miscellaneous minor transactions.

Washoe	12/31/2024

MARKETING PLANS AND RATES

Active Transmission and Ancillary Services Rate Provisions (2015)

Project	Rate schedule designation	Rate
Central Arizona	CAP-FT2 - Firm point-to-point transmission service	\$13.56 kW/year
	CAP-NFT2 - Nonfirm point-to-point transmission service	1.55 mills/kWh
	CAP-NITS2 - Network integration transmission service	Customer load ratio share multiplied by 1/12 annual revenue requirement \$12,090,150
Central Valley	CV-T3, CVP firm and nonfirm point-to-point transmission service	Formula rate
	CV-NWTS, Network transmission service	Formula rate
	COTP-T3, COTP firm and non-firm point-to-point transmission service	Formula rate
	PACI-T3, PACI firm and non-firm point-to-point transmission service	Formula rate
	CV-TPT7, Third-party transmission	Pass-through
	CV-SPR4, Spinning reserve service	Formula rate
	CV-SUR4, Supplemental reserve service	Formula rate
	CV-RFS4, Regulation and frequency response service	Formula rate
	CV-EID4, Energy imbalance service	Formula rate
	CV-GID1, Generator imbalance service	Formula rate
	CV-UUP1, Unreserved-use penalties	Formula rate
Loveland Area Projects	L-NT1, Annual transmission revenue requirement for network integration transmission service	Load ratio share of 1/12 of the revenue requirement of \$61,866,058
	L-FPT1, Long-term firm and short-term firm point-to-point transmission service	\$3.79/kW/month
	L-NFPT1, Nonfirm point-to-point transmission service	5.19 mills/kWh (maximum)
	L-AS1, Scheduling, system control and dispatch service	\$18.19 schedule/day
	L-AS2, Reactive supply and voltage control from generation sources service	\$0.278/kW/month
	L-AS3, Regulation and frequency response service	\$0.223/kW/month
	L-AS4, Energy imbalance service	Imbalance between 1.5 percent and 7.5 percent is a 10-percent penalty; imbalance greater than 7.5 percent is a 25-percent penalty
	L-AS5, Operating reserve - spinning reserve service	Pass-through cost
	L-AS6, Operating reserve - supplemental reserve service	Pass-through cost
	L-AS7, Transmission losses service	5.0 percent - weighted average real-time hourly Western Area Colorado Missouri Balancing Authority purchase price
	L-AS9, Generator imbalance service	Imbalance between 1.5 percent and 7.5 percent is a 10-percent penalty
Pacific NW-SW Intertie	L-UU1, Unreserved-use penalties	200 percent of LAP's firm point-to-point rate
	INT-FT5, Long-term and short-term firm point-to-point transmission service	\$19.32/kW/year
		\$1.61/kW/month
		\$0.3715/kW/week
		\$0.0529/kW/day
		\$0.00221/kWh
		2.21 mills/kWh
	INT-NFT4, Nonfirm point-to-point transmission service	Load ratio share of 1/12 of annual revenue requirement of \$33,036,099
	INT-NTS3, Network integration transmission service	
	DSW-SD3, Scheduling, system control and dispatch service ¹	\$27.71/tag/day
	DSW-RS3, Reactive supply and voltage control service ¹	\$0.045/kW/month
	DSW-FR3, Regulation and frequency response service ¹	\$0.1764/kW/month
	DSW-EI3, Energy imbalance service ¹	
	On-peak bandwidth	+/- 1.5 percent; 4 MW minimum
	Energy within bandwidth	100-percent return
	Energy outside bandwidth - under delivery	110-percent return
	Energy outside bandwidth - over delivery	90-percent return
	Off-peak bandwidth	+7.5 percent to -3.0 percent
		2 MW minimum (over delivery)
		5 MW minimum (under delivery)
	Energy within bandwidth	100-percent return
	Energy outside bandwidth - under delivery	110-percent return
	Energy outside bandwidth - over delivery	60-percent return
	DSW-GI1, Generator imbalance service ¹	
	On-peak bandwidth	100-percent return
	Energy within bandwidth	110-percent return
	Energy outside bandwidth - under delivery	90-percent return
	Energy outside bandwidth - over delivery	+7.5 percent to -3.0 percent
	Off-peak bandwidth	2 MW minimum (over delivery)
		5 MW minimum (under delivery)
		100-percent return
	Energy within bandwidth	110-percent return
	Energy outside bandwidth - under delivery	60-percent return
	Energy outside bandwidth - over delivery	60-percent return
	DSW-SPR3, Operating reserve - spinning reserve service ¹	Pass-through cost
	DSW-SUR3, Operating reserve - supplemental reserve service ¹	Pass-through cost

MARKETING PLANS AND RATES

Parker-Davis	PD-FT7, Long-term firm point-to-point transmission service	\$1.28/kW/month
	PD-NFT7, Nonfirm point-to-point transmission service	1.75 mills/kWh
	PD-NTS3, Network integration transmission service	Load ratio share of 1/12 of annual revenue requirements of \$47,505,116
Pick-Soan Missouri Basin Program - Eastern Division		
1/1/2015 - 12/31/2015	Integrated system network transmission rate	Load ratio share of annual revenue requirement of \$200,510,055
	Integrated system firm point-to-point rate	\$2.92/kW/month
	Integrated system nonfirm point-to-point rate	4.00 mills/kWh
	Regulation and frequency response service	\$0.06/kW/month
	Operating reserve - spinning reserve service	\$0.22/kW/month
	Operating reserve - supplemental reserve service	\$0.22/kW/month
	Scheduling, system control and dispatch service	\$38.34/tag/day
	Reactive supply and voltage control service	\$0.02/kW/month
	Energy imbalance service	i) For deviations within +/- 1.5 percent (minimum of 2 MW) of the scheduled transaction, 100 percent of average incremental cost; ii) For deviations greater than +/- 1.5 percent up to 7.5 percent (or greater than 2 MW up to 10 MW) of the scheduled transaction, 110 percent of incremental cost when energy taken is greater than energy scheduled and 90 percent of incremental cost when energy taken is less than scheduled; iii) For deviations greater than +/- 7.5 percent (or 10 MW) of the scheduled transaction, 125 percent of incremental cost when energy taken is greater than energy scheduled and 75 percent of incremental cost when energy taken is less than scheduled.
	Generator imbalance service	i) For deviations within +/- 1.5 percent (minimum of 2 MW) of the scheduled transaction, 100 percent of the average incremental cost; ii) For deviations greater than +/- 1.5 percent up to 7.5 percent (or greater than 2 MW up to 10 MW) of the scheduled transaction, 110 percent of the incremental cost when energy delivered is less than generation scheduled and 90 percent of incremental cost when energy delivered is greater than scheduled; iii) For deviations greater than +/- 7.5 percent (or 10 MW) of the scheduled transaction, 125 percent of incremental cost when energy delivered is less than energy scheduled and 75 percent of incremental cost when energy delivered is greater than scheduled. As an exception, an intermittent resource will be exempt from this deviation band and will pay the deviation band charges for all deviations greater than the larger of 1.5 percent or 2 MW.
	Penalty rate for unreserved-use transmission service	200 percent of the transmission service rate for point-to-point service of assessed as follows: the penalty for a single hour will be based upon the rate for daily firm point-to-point service; the penalty for more than one assessment of a given duration (e.g. daily) will increase to the next longest duration (e.g. weekly); the penalty charge for multiple instances of unreserved use within a day will be based on the rate for daily firm point-to-point service; the penalty charge for multiple instances of unreserved use isolated to 1 calendar week would result in a penalty based on the charge for weekly firm point-to-point service; and the penalty charge for multiple instances of unreserved use during more than 1 week during a calendar month is based on the charge for monthly firm point-to-point service.
1/1/2014 - 12/31/2014	Integrated system network transmission rate	Load ratio share of annual revenue requirement of \$195,517,977
	Integrated system firm point-to-point rate	\$2.96/kW/month
	Integrated system nonfirm point-to-point rate	4.05 mills/kWh
	Regulation and frequency response service	\$0.06/kW/month
	Operating reserve - spinning reserve service	\$0.20/kW/month
	Operating reserve - supplemental reserve service	\$0.20/kW/month
	Scheduling, system control and dispatch service	\$42.43/tag/day
	Reactive supply and voltage control service	\$0.03/kW/month
	Energy imbalance service	i) For deviations within +/- 1.5 percent (minimum of 2 MW) of the scheduled transaction, 100 percent of average incremental cost; ii) For deviations greater than +/- 1.5 percent up to 7.5 percent (or greater than 2 MW up to 10 MW) of the scheduled transaction, 110 percent of incremental cost when energy taken is greater than energy scheduled and 90 percent of incremental cost when energy taken is less than scheduled; iii) For deviations greater than +/- 7.5 percent (or 10 MW) of the scheduled transaction, 125 percent of incremental cost when energy taken is greater than energy scheduled and 75 percent of incremental cost when energy taken is less than scheduled.
	Generator imbalance service	i) For deviations within +/- 1.5 percent (minimum of 2 MW) of the scheduled transaction, 100 percent of the average incremental cost; ii) For deviations greater than +/- 1.5 percent up to 7.5 percent (or greater than 2 MW up to 10 MW) of the scheduled transaction, 110 percent of the incremental cost when energy delivered is less than generation scheduled and 90 percent of incremental cost when energy delivered is greater than scheduled; iii) For deviations greater than +/- 7.5 percent (or 10 MW) of the scheduled transaction, 125 percent of incremental cost when energy delivered is less than energy scheduled and 75 percent of incremental cost when energy delivered is greater than scheduled. As an exception, an intermittent resource will be exempt from this deviation band and will pay the deviation band charges for all deviations greater than the larger of 1.5 percent or 2 MW.
	Penalty rate for unreserved-use transmission service	200 percent of the transmission service rate for point-to-point service of assessed as follows: the penalty for a single hour will be based upon the rate for daily firm point-to-point service; the penalty for more than one assessment of a given duration (e.g. daily) will increase to the next longest duration (e.g. weekly); the penalty charge for multiple instances of unreserved use within a day will be based on the rate for daily firm point-to-point service; the penalty charge for multiple instances of unreserved use isolated to one calendar week would result in a penalty based on the charge for weekly firm point-to-point service; and the penalty charge for multiple instances of unreserved use during more than one week during a calendar month is based on the charge for monthly firm point-to-point service.
Salt Lake City Area/ Integrated Projects	SP-PTP7, Firm point-to-point transmission service	\$1.11/kW/month
	SP-NW3, Network integration transmission	Network customer's load ratio share multiplied by 1/12 total test year net annual revenue requirement
	SP-NFT6, Nonfirm point-to-point transmission service	Mutually agreed by Western and purchasing entity up to 1.51 mills/kWh
	SP-SD3, Scheduling system control and dispatch	Included in transmission rate. RM and DSW rate schedules apply for non-transmission, accordingly.
	SP-RS3, Reactive and voltage control services	RM and DSW rate schedules apply, accordingly
	SP-EI3, Energy imbalance	RM and DSW rate schedules apply, accordingly
	SP-FR3, Regulation and frequency response	\$5.18/kW/month if available, or RM rate schedules apply accordingly
	SP-SSR3, Spinning and supplemental reserves	Rate under the Western Systems Power Pool contract

¹ Ancillary service rates for the Western Area Lower Colorado Balancing Authority and Transmission Operations Area.

BOULDER CANYON PROJECT

Hoover Dam, the highest and third-largest concrete dam in the United States, sits on the Colorado River along the Arizona-Nevada border. Lake Mead, the reservoir behind Hoover Dam, is still the nation's largest man-made reservoir. It can hold a two-year supply of the average flow of the Colorado River with its live storage capacity of 27.62 million acre-feet.

This enormous project began with 1928 legislation approving construction of the Boulder Canyon Project. Hoover Powerplant has 19 generating units (two for plant use) and an installed capacity of 2,078,800 kilowatts (4,800 kW for plant use). High-voltage transmission lines and substations make it possible for people from southern Nevada, Arizona and southern California to receive power from the project.

Since the start of commercial power generation in 1936, Hoover, with yearly average generation of 4.2 billion kilowatt-hours, has served the annual electrical needs of nearly 1.3 million people. This power is marketed under the Hoover Power Plant Act of 1984 and the 1984 Conformed General Consolidated Power Marketing Criteria or Regulations for Boulder City Area Projects. Western's Desert Southwest region markets and transmits BCP power.

The Hoover Power Plant Act of 1984 sets forth the amounts of Hoover power to be sold to customers from June 1, 1987, to Sept. 30, 2017. The marketing criteria have been amended to reflect the act's provisions. On Dec. 20, 2011, the Hoover Power Allocation Act of 2011 was enacted by Congress, providing direction and guidance in the allocation of BCP power for the next 50 years after the current contracts expire.

Power from BCP is marketed as long-term contingent capacity with associated firm energy. This means that Western is obligated to deliver the energy that can be generated from the available capacity, which is highly dependent on the elevation of Lake Mead. If power is insufficient to support customer capacity entitlements, each customer's capacity entitlement is reduced or increased on a pro-rata basis to align with the available capacity at any given time. Customers are entitled to receive 4.527 billion kWh of firm energy (associated with contingent capacity) each year. If generation capacity at Hoover Powerplant is insufficient, Western can purchase energy to make up the shortfall at the request of individual customers on a pass-through cost basis.

In December 2014, DSW established the Boulder Canyon Project Post-2017 power allocations that will take effect upon expiration of the current contracts, Sept. 30, 2017. DSW's remarketing efforts consisted of a series of public processes that remarketed the power consistent with governing law, regulations and the public's best interest. DSW initiated contract discussions in spring 2015 and was still working on finalizing contracts at the end of Fiscal Year 2015. Electric service contracts will provide for the marketing of power from Oct. 1, 2017, to Sept. 30, 2067. □

¹ Installed operating capacity is the maximum generating capability of the units' at-unity power factor without exceeding the specified heat rise on each unit and is independent of water constraints.

² Actual operating capability represents the operating capability on July 1, but may not represent the coincident or non-coincident peak operating capability for the powerplant, project or Western as a whole.

³ Net generation is gross plant generation less plant use. These amounts have not been reduced by other priorities such as project pumping energy.

⁴ Excludes 4.8 MW reserved for plant use but included in number of units.

CENTRAL VALLEY PROJECT

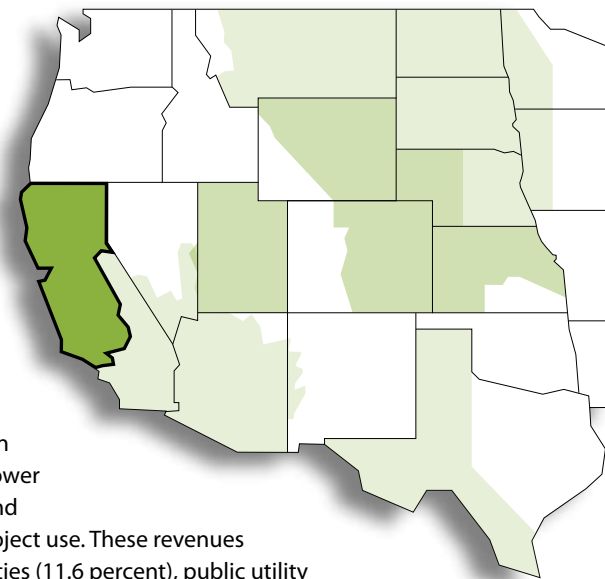

The Central Valley Project in California's Central Valley has 18 dams that create reservoirs with a total storage capacity of 13 million acre-feet. Two years after the project was authorized in 1937, construction began on 615 miles of canals, five pumping plants and 11 powerplants, consisting of 38 hydroelectric generating units. Irrigation features of the CVP cover an area 400 miles long by 45 miles wide, making up almost one-third of California. The generating units have an installed capacity of 2,112 megawatts. The CVP includes 956 circuit miles of high-voltage transmission lines.

In Fiscal Year 2015, the inflow to the four major CVP reservoirs (Trinity, Folsom, New Melones and Shasta) was 5.7 million acre-feet, about 53 percent of the long-term average of 10.8 million acre-feet. As of Sept. 30, 2015, the combined storage of these four facilities was 2.6 million acre-feet or about 44 percent of average. Net generation totaled 2.5 billion kilowatt-hours.

Allocations made through power marketing plans of the CVP govern power sales. All of the existing power sales contracts will expire on Dec. 31, 2024. Each customer receives a percentage of the output of the CVP generation, referred to as a base resource allocation. The CVP generation will vary hourly, daily, monthly and annually because it is subject to hydrological conditions and other constraints that may govern CVP operations. In addition, certain customers also receive additional power products to complement their base resource allocations. These additional power products supplement the base resource allocation and are provided through custom power contracts.

Western's requirements to support generation through power purchases decreased from 3,608,036 megawatt-hours in FY 2014 to 3,445,609 MWh in FY 2015. FY 2015 long-term power sales totaled 5.0 billion kWh and \$228 million, not including project use. These revenues were derived from: municipalities (11.6 percent), public utility districts (62.7 percent), federal agencies (12.0 percent) and others (13.7 percent). About 78 percent of CVP's firm power in FY 2015 was sold to five customers: Sacramento Municipal Utility District, City of Redding, Northern California Power Agency, Department of Energy–Berkeley Site Office and the University of California–Davis.

Formula-rate methodologies were approved by the Federal Energy Regulatory Commission in Rate Order No. WAPA 156, effective Oct. 1, 2011, through Sept. 30, 2016. Under the Rate Order, Schedule CV-F13 contains a Power Revenue Requirement that is allocated to all preference customers. For the period Oct. 1, 2014, through Sept. 30, 2015, the Power Revenue Requirement was \$70.1 million, an increase of 2.8 percent from the FY 2014 Power Revenue Requirement of \$68.2 million. □

¹ Installed operating capacity is the maximum generating capability of the units' at-unity power factor without exceeding the specified heat rise on each unit and independent of water constraints.

² Actual operating capability represents the operating capability of July 1, but may not represent the coincident or non-coincident peak operating capability for the powerplant, project or Western as a whole.

³ Net generation is gross plant generation less plant use. These amounts have not been reduced by other priorities such as project pumping energy. Trinity generation includes generation from Lewiston.

⁴ Pump/generating plant.

⁵ Station service units' capacity is not included.

⁶ United States' share (47.67 percent) of plant capacity.

Transmission Services Revenues

Transmission service	FY 2015 ¹	FY 2014 ²
	Revenue (\$)	Revenue (\$)
Wheeling and transmission service	10,825,021	11,655,822
Firm network transmission service	8,479,189	8,201,329
Firm point-to-point transmission service	14,502,186	13,922,889
Transmission losses	812,746	359,351
Nonfirm point-to-point transmission service	364,532	228,665
Short term point-to-point transmission service	75,010	111,409
Transmission services total	35,058,684	34,479,465

¹ Transmission services revenues as presented in this table are \$48.3 million less than the FY 2015 transmission and other operating revenues presented in the statements of revenues and expenses and accumulated net revenues due to the following: -\$0.6 million in variances between transmission services revenues accrual estimates and actual transmission services revenues; \$2.6 million presented separately in the Ancillary Services Revenues table; -\$66,000 in ancillary services revenue reconciling items as explained in Footnote 1 to the Ancillary Services Revenues table; and other miscellaneous minor transactions.

² Transmission services revenues as presented in this table are \$35.4 million less than the FY 2014 transmission and other operating revenues presented in the statements of revenues and expenses and accumulated net revenues due to the following: -\$0.4 million in variances between transmission services revenue accrual estimates and actual transmission services revenues; \$2.3 million presented separately in the Ancillary Services Revenues table; \$0.4 million in ancillary services revenue reconciling items as explained in Footnote 2 to the Ancillary Services Revenues table; \$33.0 million in other revenues excluded from the revenue tables and explained in Footnote 2 to the Ancillary Services Revenues table; and other miscellaneous minor transactions.

Ancillary Services Revenues

Ancillary service	FY 2015 ¹	FY 2014 ²
	Revenue (\$)	Revenue (\$)
Operating reserves - supplemental	101,597	43,388
Operating reserves - spinning	694,041	878,499
Regulation and frequency response	1,589,220	1,414,260
Energy imbalance service	249,278	12,641
Ancillary services total	2,634,136	2,348,788

¹ Ancillary services revenues as presented in this table are \$80.7 million less than the FY 2015 transmission and other operating revenues presented in the statements of revenues and expenses and accumulated net revenues due to the following: -\$66,000 in variances between ancillary services revenue accrual estimates and actual ancillary services revenues; \$45.0 million in other revenues excluded from the revenue tables, made up of \$40.8 million in California Independent System Operator and resource adequacy, \$1.7 million in scheduling services and \$0.7 million in portfolio management; \$35.1 million presented separately in the Transmission Services Revenues table; \$0.6 million in transmission services revenue reconciling items as explained in Footnote 1 to the Transmission Services Revenues table; and other miscellaneous minor transactions.

² Ancillary services revenues as presented in this table are \$67.5 million less than the FY 2014 transmission and other operating revenues presented in the statements of revenues and expenses and accumulated net revenues due to the following: \$0.4 million in variances between ancillary services revenue accrual estimates and actual ancillary services revenues; \$33.0 million in other revenues excluded from the revenue tables, made up of \$30.8 million in California Independent System Operator and resource adequacy, \$1.5 million in scheduling services and \$0.7 million in portfolio management; \$35.5 million presented separately in the Transmission Services Revenues table; -\$0.4 million in transmission services revenue reconciling items as explained in Footnote 2 to the Transmission Services Revenues table; and other miscellaneous minor transactions.

¹ The pass-through revenues and expenses for the supplemental power sales for the City of Redding and the Sacramento Municipal Utility District are included in the statistical appendix, but they are netted in the combined financial statements.

² The City of Redding includes allocations to the City of Shasta Lake and the Redding Rancheria.

³ The Lassen Municipal Utility District includes an allocation to the Susanville Indian Rancheria.

⁴ The Turlock Irrigation District includes an allocation to the Patterson Water District.

⁵ New customer effective Jan. 1, 2015.

⁶ The University of California-Davis, includes an allocation to the University of California-Berkeley.

⁷ The Eastside Power Authority includes an allocation to the San Luis Water District.

⁸ The Northern California Power Agency includes allocations to the cities of Alameda, Biggs, Fallon, Gridley, Healdsburg, Lodi, Lompoc, Palo Alto and Ukiah, as well as the Plumas-Sierra Rural Electric Cooperative, the Port of Oakland and the Truckee Donner Public Utility District.

⁹ The Power and Water Resources Pooling Authority includes allocations to Arvin-Edison Water Storage District; Banta-Carbona, Byron-Bethany, Glenn-Colusa, James, Lower Tule River, Provident and Princeton, West Side and West Stanislaus irrigation districts; Cawelo and Westlands Water Districts; and Reclamation District #108.

¹⁰ Power revenues as presented in this table are \$99.8 million greater than the FY 2015 sales of electric power amount presented in the statements of revenues and expenses and accumulated net revenues due to the following: \$122.4 million in netted transactions where Western simultaneously purchased and sold electric power to the same counterparty; -\$21.8 million in project-use revenues that were reversed due to Governmentwide Treasury Account Symbol Adjusted Trial Balance System recording issues and rebilled in FY 2015; -\$0.8 million in variances between revenue accrual estimates and actual revenues along with other minor miscellaneous corrections and transactions.

¹¹ Power revenues as presented in this table are \$150.3 million greater than the FY 2014 sales of electric power presented in the statements of revenues and expenses and accumulated net revenues due to the following: \$129.3 million in netted transactions where Western simultaneously purchased and sold electric power to the same counterparty; \$21.8 million in project-use revenues, which were reversed due to Governmentwide Treasury Account Symbol Adjusted Trial Balance System recording issues and rebilled in FY 2015; -\$0.8 million in variances between revenue accrual estimates and actual revenues along with other minor miscellaneous corrections and transactions.

LOVELAND AREA PROJECTS

Western's Post-1989 Power Marketing Plan, administered by the Rocky Mountain region, operationally and contractually integrates the Fryingpan-Arkansas Project, commonly referred to as Fry-Ark, and the Pick-Sloan Missouri Basin Program—Western Division as the Loveland Area Projects for marketing and rate-setting purposes. In Fiscal Year 2015, RM delivered LAP power to customers under 46 firm electric service, or FES, power contracts and 12 Bureau of Reclamation project-use contracts in Colorado, Kansas, Nebraska and Wyoming.

RM uses a single LAP rate design for FES, based upon the combined Fry-Ark and Western Division revenue requirements. The current FES rate, effective Jan. 1, 2015, is made up of a base rate of 29.90 mills per kilowatt-hour and a drought-adder component of 11.52 mills/kWh. The charge components were reviewed during spring 2015, which resulted in no changes being made for the following year. Western will continue to annually evaluate the need for a rate adjustment.

Fry-Ark and Western Division financial and repayment responsibilities remain separate. The Pick-Sloan Missouri Basin Program financial statements contain information that reflect costs from both the Eastern and Western divisions, as well as the generating agencies—Reclamation and U.S. Army Corps of Engineers. The Western Division is allocated a portion of those costs. Fry-Ark financial statements reflect Western and Reclamation Fry-Ark information.

The LAP firm power contracts, which are in effect through Sept. 30, 2024, provide a fixed amount of capacity and energy each month. LAP firm energy is determined on long-term average generation; capacity is allocated based on the amount determined to be available 90 percent of the time.

RM published the Final Notice for the LAP 2025 Power Marketing Initiative, which was developed through a public process and extends the current Post-1989 Marketing Plan, with amendments to key marketing plan principles, from Oct. 1, 2024, through Sept. 30, 2054. RM developed new FES contracts to implement the provisions of the 2025 PMI and began executing the contracts in FY 2015 to ensure the delivery of LAP power through Sept. 30, 2054. RM has executed contracts with more than 80 percent of the LAP allocation holders and will continue to work with customers to execute the remaining 2025 LAP PMI contracts.

On Oct. 1, 2012, LAP implemented a “forward-looking” transmission formula rate to calculate the Annual Transmission Revenue Requirement to recover transmission expenses and investments on a current basis rather than a historical basis. This method allows LAP to more accurately match cost recovery with cost incurrence. The forward-looking methodology also allows for the true up of projected costs for the prior rate period to ensure Western recovers no more or no less than the actual transmission costs for the year.

RM held an informal customer meeting, Aug. 11, 2015, to inform customers of upcoming changes to formula rates for LAP transmission and ancillary services. At the meeting, RM also introduced a new LAP marketing rate schedule to sell surplus energy and capacity products.

The LAP area was drought-free in FY 2015. LAP reservoir storage was 118 percent of average at the beginning of FY 2015. There was a disappointing snowpack as late as April 2015, but a cool and wet May not only brought above-average reservoir inflows but delayed significant demands for project water until later in the irrigation season. The reservoir inflows were 117 percent of average for the Colorado-Big Thompson Project, 98 percent in the North Platte Basin and 116 percent in the Bighorn Basin. The resulting LAP reservoir storage at the end of FY 2015 was 119 percent of average—nearly the same as in the previous year. LAP generation was 88 percent of the 30-year average in FY 2015 as the late-developing cool and wet spring conditions with low water demands caused reservoirs prepositioned for a below-average spring runoff to fill and spill with water bypassing many LAP powerplants. The resulting purchase power expense of \$23.5 million for FY 2015 was partially offset by \$7.2 million of nonfirm surplus generation sales. □

Fryingpan-Arkansas

This multipurpose transmountain diversion project is located in south-central Colorado. It diverts water from the Fryingpan River on the western slope of the Rocky Mountains to the Arkansas River on the eastern slope to support irrigation, municipal water supplies and electric power generation. The Bureau of Reclamation owns all Fry-Ark facilities constructed to date.

The project has six dams and five reservoirs with a total storage capacity of 741,000 acre-feet of water, 70 miles of tunnels and canals and the Mount Elbert pumped-storage powerplant on the shore of Twin Lakes Reservoir. The two Mount Elbert pump generating units have a combined installed generating capacity of 200 megawatts. Although the majority of project capacity depends on water pumped during off-peak hours and water releases for power production when needed in on-peak hours, some generation is attributed to flow-through water.

The Mount Elbert pumped-storage plant has proven to be particularly valuable to Western and its customers. The plant provides Western with system regulation and reserves while firm power customers have maximized their use of the pumped-storage capability under their contracts by taking delivery during the day (on-peak) and returning energy at night (off-peak) to pump water back into the Mount Elbert forebay from Twin Lakes Reservoir.

Pick-Sloan Missouri Basin Program—Western Division

Both the Eastern and Western divisions have common electrical facilities at Yellowtail Dam in Montana and at a point near Gering, Nebraska. The divisions, however, operate as separate and distinct systems. Both divisions contribute revenue to repay Pick-Sloan expenses and investments using different generating resources, firm power allocation methodologies and rate structures.

The installed capacity of the Western Division's 19 powerplants is 630 megawatts. These generating resources include six powerplants built as part of five units of the Pick-Sloan: Boysen, Glendo, Kortes, Riverton and Yellowtail. The remaining 13 powerplants were constructed as part of four other Reclamation projects authorized before Pick-Sloan. These projects, which are now integrated with Pick-Sloan, are the Colorado-Big Thompson, Kendrick, North Platte and Shoshone projects and are referred to as the Integrated Projects. Reclamation owns, operates and maintains all Western Division powerplants. □

¹ Installed operating capacity is the maximum generating capability of the units' at-unity power factor without exceeding the specified heat rise on each unit and independent of water constraints.

² Actual operating capability represents the operating capability on July 1, but may not represent the coincident or non-coincident peak operating capability for the powerplant, project or Western as a whole.

³ Net generation is gross plant generation less plant use. These amounts have not been reduced by other priorities such as project pumping energy.

⁴ Pump/generating plant.

⁵ Only Unit 3 has pump/generation capability.

⁶ RM and UGP each market half of the plant capability and energy.

⁷ Normal sustained maximum capacity of each unit is 62.5 MW, but units may be evaluated for higher output on a case-by-case basis.

⁸ Plant mothballed due to repair cost but not decommissioned.

Operating agency:

Reclamation - Bureau of Reclamation, Department of the Interior

Storage

Generation

LOVELAND AREA PROJECTS

Active Firm Power Rate Provisions

Fiscal year	Rate schedule designation	Capacity charge (\$/kW of billing demand)	Energy charge not in excess of delivery obligations	Effective date	Annual composite rate
2015	L-F10	5.43	20.71 mills/kWh	1/1/2015	41.42 mills/kWh

Active Rate Actions

Rate order number	Project	Type of rate action	Date of notice of public participation	Rate schedule designation	Effective date of rate (first day of first full billing period)	Annual incremental (\$ in thousands)	Notes	Date submitted to FERC	Date of FERC confirmation
WAPA-167	Loveland Area Projects	Firm electric service rate adjustment	8/8/2014	L-F10	1/1/2015	N/A	N/A	12/4/2014	6/25/2015

Active Marketing Plan

Project	Expiration date
Loveland Area Projects	9/30/2054

Active Transmission and Ancillary Services Rate Provisions

Fiscal year	Rate schedule designation	Rate
2015	L-NT1, Annual transmission revenue requirement for network integration transmission service	Load ratio share of 1/12 of the revenue requirement of \$61,866,058
2015	L-FPT1, Long-term firm and short-term firm point-to-point transmission service	\$3.79/kW/month
2015	L-NFPT1, Nonfirm point-to-point transmission service	5.19 mills/kWh (maximum)
2015	L-AS1, Scheduling, system control and dispatch service	\$18.19 schedule/day
2015	L-AS2, Reactive supply and voltage control from generation sources service	\$0.278/kW/month
2015	L-AS3, Regulation and frequency response service	\$0.223/kW/month
2015	L-AS4, Energy imbalance service	Imbalance between 1.5 percent and 7.5 percent is a 10-percent penalty; imbalance greater than 7.5 percent is a 25-percent penalty
2015	L-AS5, Operating reserve - spinning reserve service	Pass-through cost
2015	L-AS6, Operating reserve - supplemental reserve service	Pass-through cost
2015	L-AS7, Transmission losses service	5.0 percent - weighted average real-time hourly Western Area Colorado Missouri Balancing Authority purchase price
2015	L-AS9, Generator imbalance service	Imbalance between 1.5 percent and 7.5 percent is a 10-percent penalty
2015	L-UU1, Unreserved-use penalties	200 percent of LAP's firm point-to-point rate

¹ Loveland Area Projects consist of the Fryingpan-Arkansas and the Pick-Sloan Missouri Basin Program—Western Division projects. The statements of revenues and expenses and accumulated net revenues (financial statements) for Loveland Area Projects only include the Fryingpan-Arkansas project. The Pick-Sloan Western Division is combined with the Pick-Sloan Missouri River Basin—Eastern Division. To reconcile the sales and purchased power/transmission cost tables and financial statements for these projects, the Fryingpan-Arkansas project and the Pick-Sloan Eastern and Western divisions need to be added together.

PARKER-DAVIS PROJECT

The Parker-Davis Project was formed by consolidating two projects, Parker Dam and Davis Dam, under terms of the Consolidate Parker Dam Power Project and Davis Dam Project Act on May 28, 1954.

Davis Dam, on the Colorado River 67 miles (107.8 km) below Hoover Dam, created Lake Mohave. The project was authorized under the Reclamation Project Act of 1939. Construction began in 1941, but due to delays caused by World War II, it was not completed until 1953. Davis Dam has a storage capacity of 1.8 million acre-feet. The five generation units' operating capacity is 255,000 kW.

Parker Dam, which created Lake Havasu 155 miles (250 km) below Hoover Dam on the Colorado River, was authorized by the Rivers and Harbors Act of Aug. 30, 1935. Reclamation constructed the project partly with funds advanced by the Metropolitan Water District of Southern California, which now diverts nearly 1.2 million acre-feet each year by pumping it from Lake Havasu. The Cooperative Contract for Construction and Operation of Parker Dam was agreed to in 1933. MWD receives half of the capacity and energy from four generating units. The 50-percent federal share of Parker Powerplant capacity, as determined by Reclamation, is 60,000 kW.

The Parker-Davis Project is currently marketed to 37 customers in southern Nevada, Arizona and southern California, and it supplies the electrical needs of more than 300,000 people. The project includes 1,529 circuit-miles of high-voltage transmission lines in Arizona, southern Nevada and along the Colorado River in southern California.

Parker-Davis Project's power marketing criteria is part of the 1984 Conformed General Consolidated Power Marketing Criteria of the Boulder City Area Office (now Western's Desert Southwest region).

Existing Parker-Davis Project firm power contracts were due to expire on Sept. 30, 2008. In December 2006, Western announced the final Post-2008 Resource Pool Allocation Procedures for existing and new preference customers. As a result, all firm power contracts entered into under the Post-2008 Procedures (25 existing, 12 new) became effective Oct. 1, 2008, and expire Sept. 30, 2028.

Currently, the marketed Parker-Davis Project resource, excluding project-use power, provides for 221,705 kW of capacity in the winter season and 283,676 kW capacity in the summer season. Customers receive 1,703 kilowatt-hours (winter season) and 3,441 kWh (summer season) of energy with each kW of capacity. Excluding project use, total marketable energy is 393 million kWh (winter season) and 1,032 million kWh (summer season).

A portion of the resource marketed is reserved for U.S. priority use, but is not presently needed. This portion—9,460 kW of capacity and associated energy in the winter season and 16,030 kW of capacity and associated energy in the summer season—is withdrawable from existing customers upon two years' written notice.

Water demands in the Lower Colorado River Basin and releases from Hoover Dam determine the operation of the Parker-Davis Project. Parker Dam released 6.1 million acre-feet and Davis Dam released 98.9 million acre-feet during Fiscal Year 2015. Storage in Lake Mohave was 1.6 million acre-feet and storage in Lake Havasu was 0.6 million acre-feet at the end of the fiscal year.

The net generation for the Parker-Davis Project decreased from 1,398 gigawatt-hours in FY 2014 to 1,341 GWh in FY 2015. During FY 2015, there were about 87.4 GWh of power purchases required to meet statutory obligations.

FY 2015 energy sales were made according to the marketable energy outlined in Parker-Davis firm electric service contracts. □

¹ Installed operating capacity is the maximum generating capability of the units' at-unity power factor without exceeding the specified heat rise on each unit and is independent of water constraints.

² Actual operating capability represents the operating capability on July 1, but may not represent the coincident or non-coincident peak operating capability for the powerplant, project or Western as a whole.

³ Net generation is gross plant generation less plant use. These amounts have not been reduced by other priorities such as project pumping energy.

⁴ United States' share (50 percent) of plant capacity.

PICK-SLOAN MISSOURI BASIN PROGRAM

The Pick-Sloan Missouri Basin Program, originally the Missouri River Basin Project, was authorized by Congress in the Flood Control Act of 1944. The multipurpose program provides authorization for construction of certain public works and improvements on rivers and harbors for flood control, generation of hydropower, resources for water supply and irrigation, aids to navigation, preservation of water quality, enhancement of fish and wildlife and creation of recreation opportunities. Pick-Sloan power is marketed by two Western regions. Western's Upper Great Plains region markets the Eastern Division and the Rocky Mountain region markets the Western Division through the Loveland Area Projects.

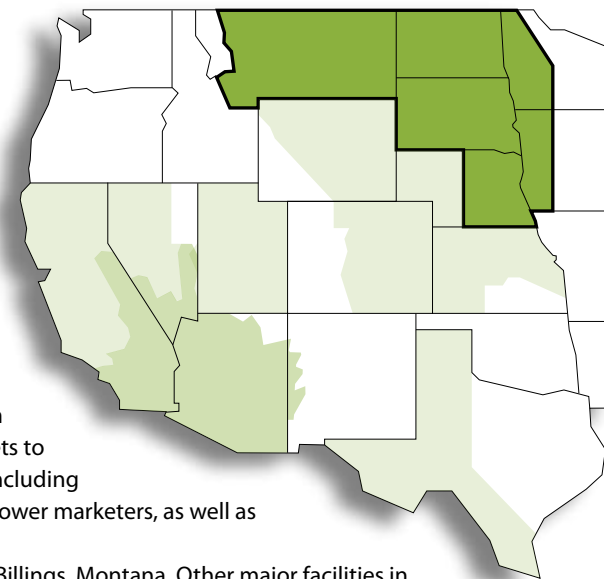

Eastern Division

Seven mainstem dams and powerplants on the Missouri River produce hydroelectric power for the Eastern Division of the Pick-Sloan. They are: Canyon Ferry Dam in western Montana; Fort Peck Dam at Fort Peck, Montana; Garrison Dam at Riverdale, North Dakota; Oahe Dam at Pierre, South Dakota; Big Bend Dam at Fort Thompson, South Dakota; and the Fort Randall and Gavins Point Dams in southern South Dakota. The Yellowtail Dam on the Bighorn River in south-central Montana produces power for both the Eastern and the Western divisions of the Pick-Sloan. Including one-half of Yellowtail Dam, Eastern Division powerplants generate more than 10 billion kilowatt-hours in an average year.

UGP serves customers across more than 378,000 square miles in the northern Rocky Mountain and western plains states. Power is delivered through 123 substations and across 7,917 miles of federal transmission lines, which connect with other regional transmission

systems. UGP's 330-plus customers include rural electric cooperatives, municipalities, public utilities, public power districts, Native American tribes, irrigation districts and federal and state agencies. Energy available after Western meets its firm preference power customer obligations is sold in the competitive energy markets to a variety of power suppliers, including investor-owned utilities and power marketers, as well as preference customers.

UGP's office is located in Billings, Montana. Other major facilities in the Eastern Division marketing area include the Power Systems Operations Office in Watertown, South Dakota, where the power system is managed and operated to ensure system reliability. Three maintenance offices oversee 12 line crews and eight substation crews in the maintenance of the Eastern Division's extensive transmission system. They are located in Bismarck, North Dakota; Huron, South Dakota; and Fort Peck, Montana. Miles City, Montana, is home to UGP's back-to-back direct-current converter station. The station

can receive alternating current from either the eastern or western electrical system interconnections, convert it into DC, and deliver AC into the opposing system. UGP's Operations Office performs the scheduling across the Miles City DC interconnection and the Fort Peck office manages maintenance of the Miles City Converter Station.

UGP's transmission system has been jointly developed and planned with our neighbors and partners for several decades and was known as the Joint Transmission System. In 1998, UGP, Basin Electric Power Cooperative and Heartland Rural Electric Cooperative partnered to establish the Integrated System, originating from the JTS, which includes 9,848 miles of transmission lines owned by Basin, Heartland and UGP. Historically, transmission service over the IS was provided under Western's Open Access Transmission Tariff, with UGP serving as tariff administrator for the IS.

During Fiscal Year 2015, UGP continued integration efforts to join the Southwest Power Pool, a Regional Transmission Organization. Upon joining SPP in FY 2016, UGP will transfer functional control of UGP's Eastern Interconnection transmission facilities to SPP through membership in SPP, which not only places transmission service over these facilities under the terms of the SPP Tariff, but places the load and generation connected to these facilities in the SPP Integrated Marketplace. UGP also will transfer functional control of UGP's Western Interconnection transmission facilities through a negotiated agreement. This will allow SPP to sell transmission service over UGP's Western Interconnection transmission facilities, while not including the generation and load connected to these facilities in the SPP Integrated Marketplace. With UGP's and the other IS owners membership, SPP will span a footprint of almost 575,000 square miles in parts of 14 central states that includes nearly 5,000 substa-

tions and about 56,000 miles of high-voltage transmission lines. Upon joining SPP, UGP's Eastern Interconnection Balancing Authority Area will be consolidated within the SPP Balancing Authority Area.

UGP's IS transmission and ancillary services forward-looking formula rates were extended, effective Jan. 1, 2015, to allow rates under the IS rates to remain in effect until UGP turns over functional control of its transmission assets in FY 2016. . These formula rates are calculated annually using updated financial and load information from the IS parties. The forward-looking formula rates use estimates of expenses and load that are trued-up to actual expenses and load during a future rate recalculation. At the same time, UGP developed specific transmission and ancillary service rates to be used once UGP transfers functional control of UGP's transmission facilities to SPP next fiscal year. These rates will replace the IS rates and will allow UGP to recover its revenue requirements through the SPP Tariff.

Runoff into the Missouri River basin was slightly above average during 2015. UGP experienced normal generation of 10.0 billion kilowatt-hours in FY 2015. The region purchased 2.1 billion kWh at a cost of \$70.5 million to support its firm power obligations. These purchases were mostly due to normal timing differences.

The current Pick-Sloan Eastern Division firm power rate, effective Jan. 1, 2015, is comprised of a base rate and a drought-adder component. The charge components were reviewed during the spring of 2015 and it was determined that the base and drought-adder charge components were sufficient. □

¹ Maximum operating capacity is the maximum generating capability of the units' at-unity power factor without exceeding the specified heat rise on each unit and independent of water constraints.

² Actual operating capability represents the operating capability on July 1, but may not represent the coincident or non-coincident peak operating capability for the powerplant, project or Western as a whole.

³ Net generation is gross plant generation less plant use. These amounts have not been reduced by other priorities such as project pumping energy.

⁴ RM and UGP each market half of the plant capability and energy.

⁵ Normal sustained maximum capacity of each unit is 62.5 MW but units may be evaluated for higher output on a case-by-case basis.

Scheduling and dispatch service	84,092	88,355
Operating reserves - spinning	1,208,891	1,402,364
Regulation and frequency response	2,075,118	2,105,432
Ancillary services total	4,434,540	5,060,492

¹ Ancillary services revenues as presented in this table are \$137.6 million less than the FY 2015 transmission and other operating revenues presented in the statements of revenues and expenses and accumulated net revenues due to the following: \$1.1 million in other revenues excluded from the revenue tables; \$64.4 million presented separately in the Transmission Services Revenues table; -\$1.1 million in transmission services revenue reconciling items as explained in Footnote 1 to the Transmission Services Revenues table; \$71.0 million in revenue related to Pick-Sloan Missouri Basin Program—Western Division, which is included separately as part of Loveland Area Project's revenue tables and is comprised of \$45.7 million in transmission services revenues, \$24.5 million in ancillary services revenues and \$0.7 million in other revenues.

² Ancillary services revenues as presented in this table are \$126.1 million less than the FY 2014 transmission and other operating revenues presented in the statements of revenues and expenses and accumulated net revenues due to the following: -\$0.1 million in variances between ancillary services revenue accrual estimates and actual ancillary services revenues; \$0.9 million in other revenues excluded from the revenue tables; \$63.8 million presented separately in the Transmission Services Revenues table; \$2.1 million in transmission services revenue reconciling items as explained in Footnote 2 to the Transmission Services Revenues table; \$63.5 million in revenues related to Pick-Sloan Missouri Basin Program—Western Division, which is included separately as part of Loveland Area Project's revenue tables and is comprised of \$48.6 million in transmission services revenues, \$14.1 million in ancillary services revenues and \$0.7 million in other revenues; and other miscellaneous minor transactions.

Active Transmission Rate Provisions

Year	Rate schedule designation	Rate
1/1/2015 - 12/31/2015	Integrated system network transmission rate	Load ratio share of annual revenue requirement of \$200,510,055
	Integrated system firm point-to-point rate	\$2.92/KW/month
	Integrated system nonfirm point-to-point rate	4.00 mills/kWh
	Regulation and frequency response service	\$0.06/kW/month
	Operating reserve - spinning reserve service	\$0.22/kW/month
	Operating reserve - supplemental reserve service	\$0.22/kW/month
	Scheduling, system control and dispatch service	\$38.34/tag/day
	Reactive supply and voltage control service	\$0.02/kW/month
	Energy imbalance service	i) For deviations within +/- 1.5 percent (minimum of 2 MW) of the scheduled transaction, 100 percent of average incremental cost; ii) For deviations greater than +/- 1.5 percent up to 7.5 percent (or greater than 2 MW up to 10 MW) of the scheduled transaction, 110 percent of incremental cost when energy taken is greater than energy scheduled and 90 percent of incremental cost when energy taken is less than scheduled; iii) For deviations greater than +/- 7.5 percent (or 10 MW) of the scheduled transaction, 125 percent of incremental cost when energy taken is greater than energy scheduled and 75 percent of incremental cost when energy taken is less than scheduled.
	Generator imbalance service	i) For deviations within +/- 1.5 percent (minimum of 2 MW) of the scheduled transaction, 100 percent of the average incremental cost; ii) For deviations greater than +/- 1.5 percent up to 7.5 percent (or greater than 2 MW up to 10 MW) of the scheduled transaction, 110 percent of the incremental cost when energy delivered is less than generation scheduled and 90 percent of incremental cost when energy delivered is greater than scheduled; iii) For deviations greater than +/- 7.5 percent (or 10 MW) of the scheduled transaction, 125 percent of incremental cost when energy delivered is less than energy scheduled and 75 percent of incremental cost when energy delivered is greater than scheduled. As an exception, an intermittent resource will be exempt from this deviation band and will pay the deviation band charges for all deviations greater than the larger of 1.5 percent or 2 MW.
1/1/2014 - 12/31/2014	Penalty rate for unreserved-use transmission service	200 percent of the transmission service rate for point-to-point service of assessed as follows: The penalty for a single hour will be based upon the rate for daily firm point-to-point service; the penalty for more than one assessment of a given duration (e.g. daily) will increase to the next longest duration (e.g. weekly); the penalty charge for multiple instances of unreserved use within a day will be based on the rate for daily firm point-to-point service; the penalty charge for multiple instances of unreserved use isolated to one calendar week would result in a penalty based on the charge for weekly firm point-to-point service; and the penalty charge for multiple instances of unreserved use during more than one week during a calendar month is based on the charge for monthly firm point-to-point service.
	Integrated system network transmission rate	Load ratio share of annual revenue requirement of \$195,517,977
	Integrated system firm point-to-point rate	\$2.96/kW/month
	Integrated system nonfirm point-to-point rate	4.05 mills/kWh
	Regulation and frequency response service	\$0.06/kW/month
	Operating reserve - spinning reserve service	\$0.20/kW/month
	Operating reserve - supplemental reserve service	\$0.20/kW/month
	Scheduling, system control and dispatch service	\$42.43/tag/day
	Reactive supply and voltage control service	\$0.03/kW/month
	Energy imbalance service	i) For deviations within +/- 1.5 percent (minimum of 2 MW) of the scheduled transaction, 100 percent of average incremental cost; ii) For deviations greater than +/- 1.5 percent up to 7.5 percent (or greater than 2 MW up to 10 MW) of the scheduled transaction, 110 percent of incremental cost when energy taken is greater than energy scheduled and 90 percent of incremental cost when energy taken is less than scheduled; iii) For deviations greater than +/- 7.5 percent (or 10 MW) of the scheduled transaction, 125 percent of incremental cost when energy taken is greater than energy scheduled and 75 percent of incremental cost when energy taken is less than scheduled.
	Generator imbalance service	i) For deviations within +/- 1.5 percent (minimum of 2 MW) of the scheduled transaction, 100 percent of the average incremental cost; ii) For deviations greater than +/- 1.5 percent up to 7.5 percent (or greater than 2 MW up to 10 MW) of the scheduled transaction, 110 percent of the incremental cost when energy delivered is less than generation scheduled and 90 percent of incremental cost when energy delivered is greater than scheduled; iii) For deviations greater than +/- 7.5 percent (or 10 MW) of the scheduled transaction, 125 percent of incremental cost when energy delivered is less than energy scheduled and 75 percent of incremental cost when energy delivered is greater than scheduled. As an exception, an intermittent resource will be exempt from this deviation band and will pay the deviation band charges for all deviations greater than the larger of 1.5 percent or 2 MW.
	Penalty rate for unreserved-use transmission service	200 percent of the transmission service rate for point-to-point service of assessed as follows: the penalty for a single hour will be based upon the rate for daily firm point-to-point service; the penalty for more than one assessment of a given duration (e.g. daily) will increase to the next longest duration (e.g. weekly); the penalty charge for multiple instances of unreserved use within a day will be based on the rate for daily firm point-to-point service; the penalty charge for multiple instances of unreserved use isolated to one calendar week would result in a penalty based on the charge for weekly firm point-to-point service; and the penalty charge for multiple instances of unreserved use during more than one week during a calendar month is based on the charge for monthly firm point-to-point service.

¹ Purchased power as presented in this table is \$23.4 million less than the FY 2015 purchased power expense presented in the statements of revenues and expenses and accumulated net revenues due to the following: -\$0.4 million in variances between purchased power accrual estimates and actual purchased power; \$23.1 million related to Pick-Sloan Missouri Basin Program—Western Division, which is included separately as part of Loveland Area Project's table; and other miscellaneous minor transactions.

² Purchased power as presented in this table is \$23.7 million less than the FY 2014 purchased power expense presented in the statements of revenues and expenses and accumulated net revenues due to the following: \$0.2 million in interchange energy excluded from the purchased power table; -\$0.3 million in variances between purchased power accrual estimates and actual purchased power; \$23.6 million related to Pick-Sloan Missouri Basin Program—Western Division, which is included separately as part of Loveland Area Project's table; and other miscellaneous minor transactions.

³ Purchased power expense was less than \$1,000 in FY 2015 and FY 2014.

⁴ The purchased power costs presented in this table include joint marketing plan sales of 439,000 MWh and \$6.0 million for FY 2015; and 217,000 MWh and \$4.2 million for FY 2014.

¹ Power revenues as presented in this table are \$76.5 million and \$87.6 million less than the FY 2015 and FY 2014 sales of electric power, respectively, presented in the statements of revenues and expenses and accumulated net revenues due to the following: variances between revenue accrual estimates and actual revenues; \$76.4 million and \$84.5 million in revenue for FY 2015 and FY 2014, respectively, related to Pick-Sloan Missouri Basin Program—Western Division, which is included separately as part of Loveland Area Project's revenue tables; and other miscellaneous minor transactions and corrections.

¹ Loveland Area Projects consist of the Fryingpan-Arkansas and the Pick-Sloan Missouri Basin Program—Western Division projects. The statements of revenues and expenses and accumulated net revenues (financial statements) for Loveland Area Projects only include the Fryingpan-Arkansas project. The Western Division is combined with the Pick-Sloan Missouri Basin Eastern Division. To reconcile the sales and purchased power/transmission cost tables and financial statements for these projects, the Fryingpan-Arkansas project and the Eastern and Western divisions need to be added together.

SALT LAKE CITY AREA/INTEGRATED PROJECTS

Power generated at the Colorado River Storage Project plants and from the Collbran and Rio Grande projects was combined into the Salt Lake City Area/Integrated Projects on Oct. 1, 1987, and is marketed under the Post-2004 General Power Marketing and Allocation Criteria.

Generation from the Colorado River Storage and its participating projects (Dolores and Seedskadee), and from the Collbran and Rio Grande projects, are marketed as the Salt Lake City Area/Integrated Projects. SLCA/IP's Fiscal Year 2015 net generation was 5.3 billion kilowatt-hours, or about 4 percent less-than-average net generation. Average net generation for the integrated projects since 1989 is about 5.3 billion kWh.

SLCA/IP power marketed by Western increased 9 percent from 5.9 billion kWh in FY 2014 to 6.4 billion kWh in FY 2015. This year, power revenues increased by 9 percent from \$174 million in FY 2014 to \$191 million. To supplement firm contractual requirements and other obligations, Western purchased 1.6 million MWh in FY 2015 and 2.9 million in FY 2014.

Collbran Project

The Collbran Project, located in west-central Colorado about 35 miles northeast of Grand Junction near the town of Collbran, was authorized by Congress on July 3, 1952. Construction of the project started in 1957 and was essentially completed in 1962.

Collbran developed a major part of the unused water of Plateau Creek and its principal tributaries for irrigation, flood control, recreational and fish and wildlife benefits. It includes several small diversion dams, 34 miles of canals, 19 miles of pipeline and two powerplants (Upper and Lower Molina) with a combined capacity of 14 megawatts. Net generation in 2015 was 39 million kilowatt-hours. The five-year average generation is 37 million kWh.

Rio Grande Project

The Rio Grande Project was authorized by the Rio Grande Reclamation Project Act of Feb. 25, 1905. The project is located on the Rio Grande River in south-central New Mexico. Elephant Butte Dam, 125 miles north of El Paso, Texas, was completed in 1916. Caballo Dam, a flood control and re-regulating reservoir, located 13 miles downstream, was added to the project in 1938.

Elephant Butte Powerplant and the 115-kilovolt transmission system were added in

1940 and 1952, respectively. The transmission system was sold to the Plains Electric Generation and Transmission Cooperative in 1979. Hot Springs Substation was sold to Truth or Consequences, New Mexico, in 1984. The three-unit powerplant has an operating capacity of 28 megawatts.

Elephant Butte Powerplant produced net generation of 38 million kilowatt-hours in Fiscal Year 2015. The five-year average is 25 million kWh.

Colorado River Storage Project

The Colorado River Storage Project was authorized by the Colorado River Storage Project Act of April 11, 1956. It consists of four major storage units: Glen Canyon, on the Colorado River in Arizona near the Utah border; Flaming Gorge, on the Green River in Utah near the Wyoming border; Navajo, on the San Juan River in northwestern New Mexico near the Colorado border; and the Wayne N. Aspinall unit (formerly Curecanti), on the Gunnison River in west-central Colorado.

CRSP has a combined storage capacity that exceeds 31.9 million acre-feet. The project provides water-use developments in the upper Colorado River Basin while still maintaining water deliveries to the lower Colorado River as required by the Colorado River Compact. Five federal powerplants are associated with the project. The operating capability of CRSP's 16 generating units is 1,289 megawatts. With an average 5.2 billion kilowatt-hours of net generation for the past five years, CRSP provides for the electrical needs of more than 1 million people spread across Colorado, Utah, New Mexico and Arizona. Portions of Nevada and Wyoming are also served by CRSP. More than 2,325 circuit miles of high-voltage transmission lines are strung throughout these states to deliver power to customers.

Inflow at Lake Powell was 68 percent of average in Fiscal Year 2015. The Bureau of Reclamation's releases from Lake Powell were 9 million acre-feet. CRSP hydrogeneration produced 5 million megawatt-hours in FY 2015.

Seedskadee

The Seedskadee Project is located in southwestern Wyoming in the Upper Green River Basin, which is part of the Upper Colorado River Basin. Seedskadee was authorized for construction as a participating project of the Colorado River Storage Project by the Colorado River Storage Project Act of April 11, 1956.

The project's Fontenelle Dam and Reservoir were completed in April 1964. Power facilities associated with the dam were completed in January 1966. These included a powerplant and switchyard at Fontenelle Dam and necessary wheeling arrangements to interconnect with the Colorado River Storage Project transmission system at Flaming Gorge Powerplant. The powerplant has since been uprated to 10 megawatts. Fontenelle Powerplant came online in 1968.

The authorizing legislation requires that power's share of the project's allocated costs be repaid from power revenues from Fontenelle Powerplant.

Net generation in Fiscal Year 2015 was 76 million kilowatt-hours. The five-year average generation is 56 million kWh.

Dolores

The Dolores Project, located in Montezuma and Dolores counties in southwestern Colorado, was authorized for construction as a participating project of the Colorado River Storage Project by Public Law 90-537, on Sept. 30, 1968; and Public Law 98-569, on Oct. 30, 1984. Construction of the project began in 1977. This multipurpose project provides 12 megawatts of installed power generating capacity along with municipal and industrial water, irrigation water, and recreation and fish and wildlife enhancement. Primary storage is provided by McPhee Dam and Reservoir on the Dolores River.

Powerplants are located on McPhee Dam and Towaoc Canal to generate power for the Colorado River Storage Project power system. McPhee Dam Powerplant operates year-round on fishery releases from McPhee Reservoir, while the Towaoc Canal Powerplant operates from April to October on irrigation water supply conveyed through the canal. The powerplants at McPhee Dam—completed in 1992—and at Towaoc Canal—completed in 1993—produce 1,283 kilowatts and 11,495 kW, respectively, for use in the CRSP power system. Net generation in FY 2015 was 21 million kilowatt-hours. Five-year average generation is 19 million kWh.

Similar to the Seedskadee Project, the authorizing legislation requires that power's share of the project's allocated costs be repaid from power revenues from the two Dolores powerplants. □

SALT LAKE CITY AREA/INTEGRATED PROJECTS

Storage

Generation

Active Firm Power Rate Provisions

Fiscal year	Rate schedule designation	Capacity charge (\$/kW of billing demand)	Energy charge not in excess of delivery obligations	Effective date	Annual composite rate
2015	SLIP-F9	5.18	12.19 mills/kWh	10/1/2009	29.62 mills/kWh

Active Transmission and Ancillary Services Rate Provisions

Fiscal year	Rate schedule designation	Rate
2015	SP-PTP7, Firm point-to-point transmission service	\$1.11/kW/month
2015	SP-NW3, Network integration transmission	Network customer's load ratio share multiplied by 1/12 total test year net annual revenue requirement
2015	SP-NFT6, Nonfirm point-to-point transmission service	Mutually agreed by Western and purchasing entity up to 1.51 mills/kWh
2015	SP-SD3, Scheduling system control and dispatch	Included in transmission rate. RM and DSW rate schedules apply for non-transmission, accordingly.
2015	SP-RS3, Reactive and voltage control services	RM and DSW rate schedules apply, accordingly
2015	SP-EI3, Energy imbalance	RM and DSW rate schedules apply, accordingly
2015	SP-FR3, Regulation and frequency response	\$5.18/kW/month if available, or RM rate schedules apply accordingly
2015	SP-SSR3, Spinning and supplemental reserves	Rate under the Western Systems Power Pool contract

¹Maximum operating capacity is the maximum generating capability of the units' at-unity power factor without exceeding the specified heat rise on each unit and independent of water constraints.

²Actual operating capability represents the operating capability on July 1, but may not represent the coincident or non-coincident peak operating capability for the powerplant, project or Western as a whole.

³Net generation is gross plant generation less plant use. These amounts have not been reduced by other priorities such as project pumping energy.

Operating agency:

Reclamation - Bureau of Reclamation, Department of the Interior

Purchased Western Replacement Power total¹	431,845	12,754	880,057	32,135

¹Western Replacement Power purchases are classified as 'other' in the combining power system statements of revenues and expenses and accumulated net revenues. The WRP purchases as presented in this table are \$1.8 million and \$0.2 million less than the purchase power reported in the other combining power system statements of revenues and expenses and accumulated net revenues for FY 2015 and FY 2014, respectively, due to variances between purchased power accrual estimates and actual purchased power along with other miscellaneous minor transactions.

Transmission Services Revenues

Transmission service	FY 2015 ¹	FY 2014 ²
	Revenue (\$)	Revenue (\$)
Firm network transmission service	179,016	195,711
Firm point-to-point transmission service	14,365,069	11,437,485
Nonfirm point-to-point transmission service	2,783,936	4,073,429
Short term point-to-point transmission service	126,590	79,440
Transmission services total	17,454,611	15,786,065

¹Transmission services revenues as presented in this table are \$9.1 million less than the FY 2015 transmission and other operating revenues presented in the statements of revenues and expenses and accumulated net revenues due to the following: \$0.6 million in network upgrade credits excluded from this table and \$0.1 million in variances between transmission services revenue accrual estimates and actual transmission services revenues; \$6.4 million presented separately in the Ancillary Services Revenues table; -\$16,000 in ancillary services revenue reconciling items as explained in Footnote 1 to the Ancillary Services Revenues table; \$3.4 million in other revenues excluded from the revenue tables and explained in Footnote 1 to the Ancillary Services Revenues table; and other miscellaneous minor transactions.

²Transmission services revenues as presented in this table are \$10.9 million less than the FY 2014 transmission and other operating revenues presented in the statements of revenues and expenses and accumulated net revenues due to the following: -\$0.9 million in variances between transmission services revenue accrual estimates and actual transmission services revenues; \$5.9 million presented separately in the Ancillary Services Revenues table; -\$0.2 million in ancillary revenue reconciling items as explained in Footnote 2 to the Ancillary Services Revenues table; \$3.9 million in other revenues excluded from the revenue tables and explained in Footnote 2 to the Ancillary Services Revenues table; and other miscellaneous minor transactions.

Ancillary Services Revenues

Ancillary service	FY 2015 ¹	FY 2014 ²
	Revenue (\$)	Revenue (\$)
Reactive supply and voltage control service	640,629	621,916
Scheduling and dispatch service	451,034	541,833
Operating reserves - spinning and supplemental	4,331,720	3,370,683
Regulation and frequency response	704,836	1,009,244
Energy imbalance service	270,215	338,732
Ancillary services total	6,398,434	5,882,408

¹Ancillary services revenues as presented in this table are \$20.2 million less than the FY 2015 transmission and other operating revenues presented in the statements of revenues and expenses and accumulated net revenues due to the following: -\$16,000 in variances between ancillary services revenue accrual estimates and actual ancillary services revenues and other miscellaneous minor transactions; \$3.4 million in other revenues excluded from the revenue tables consisting of transaction fees, reserve-sharing penalties and capital credit true-ups; \$17.5 million presented separately in the Transmission Services Revenues table; and \$0.7 million in transmission services revenue reconciling items as explained in Footnote 1 to the Transmission Services Revenues table.

²Ancillary services revenues as presented in this table are \$20.8 million less than the FY 2014 transmission and other operating revenues presented in the statements of revenues and expenses and accumulated net revenues due to the following: -\$0.2 million in variances between ancillary services revenue accrual estimates and actual ancillary services revenues; \$3.9 million in other revenues excluded from the revenue tables consisting of transaction fees, reserve-sharing penalties and capital credit true-ups; \$15.8 million presented separately in the Transmission Services Revenues table; -\$0.9 million in transmission services revenue reconciling items as explained in Footnote 2 to the Transmission Services Revenues table; and other miscellaneous minor transactions.

¹ Power revenues as presented in this table are \$1.3 million greater than the FY 2015 sales of electric power presented in the statements of revenues and expenses and accumulated net revenues due to variances between revenue accrual estimates and actual revenues along with other miscellaneous minor corrections and transactions.

² Power revenues as presented in this table are \$36.7 million greater than the FY 2014 sales of electric power presented in the statements of revenues and expenses and accumulated net revenues due to the following: \$37.0 million in net Western Replacement Power sales of which \$32.4 million are classified as other activities in Western's FY 2014 Annual Report, and the remaining \$4.6 million are classified as hydroelectric activities in Western's FY 2014 Annual Report; -\$0.3 million in variances between revenue accrual estimates and actual revenues along with other miscellaneous minor corrections and transactions.

³ Salt Lake City Area/Integrated Projects power and energy may be redistributed among certain customers to achieve greater efficiencies in using SLCA/IP resources for these customers. Because of this redistribution, power sales for a particular customer may be different than that customer's SLCA/IP allocation of firm power.

⁴ Utah Associated Municipal Power System individual customer totals were not shown to clearly represent UAMPS' total revenues.

⁵ Resource Management Services is managed by Western's Desert Southwest region Energy Management and Marketing Office.

⁶ Deseret Generation and Transmission individual customer totals were not shown to clearly represent DG&T's total revenues.

⁷ These sales are listed by the location of the marketing entity or investor-owned utility, which does not necessarily reflect the state where the energy was delivered.

OTHER PROJECTS

Central Arizona¹

The Central Arizona Project is one of three related water development projects that make up the Colorado River Basin Project. The others are the Dixie and the Upper Basin projects. The Central Arizona Project was developed for Arizona and western New Mexico; the Dixie Project for southeastern Utah; and the Upper Basin Project for Colorado and New Mexico.

Congress authorized CAP in 1968 to improve water resources in the Colorado River Basin. Segments of the 1968 authorization allowed federal participation in the Navajo Generating Station, which has three coal-fired steam electric generating units for a combined capacity of 574 megawatts. Construction of the plant, located near Lake Powell in Page, Arizona, began in 1970. Navajo began generating in 1976. The federal share of 24.3 percent, or 546,750 kilowatts, is used to power the pumps that move Colorado River water through the CAP canal. Power that is surplus to CAP pumping requirements and any needs for desalting and protecting pumping facilities is currently marketed under the Navajo Power Marketing Plan adopted on Dec. 1, 1987.

On Oct. 1, 2012, CAP moved into Western's Desert Southwest region balancing authority. DSW schedules and operates the federal share of the Navajo Generating Station used to serve CAP pumping loads and markets the remaining energy as Navajo Surplus. The amount of capacity and energy marketed varies monthly depending on an annual determination of the Central Arizona Project energy requirements for pumping.

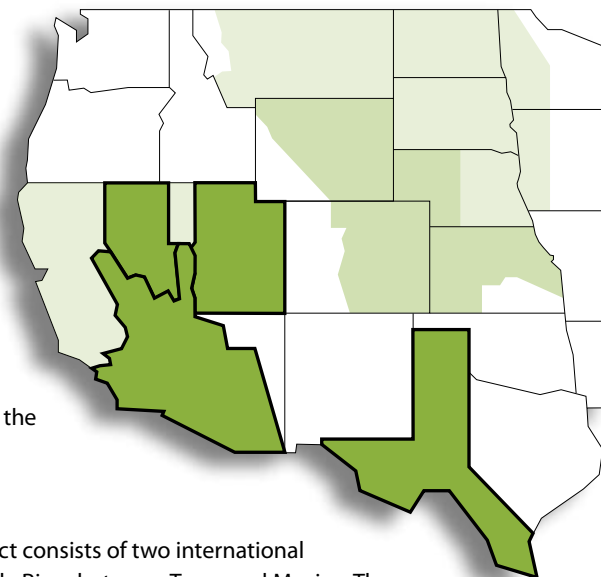

The federal share of Navajo net generation decreased from 4,423 gigawatt-hours in Fiscal Year 2014 to 3,839 GWh in FY 2015.

Electrical District 5-to-Palo Verde Hub

The Electrical District 5-to-Palo Verde Hub 230-kilovolt transmission line, completed under Western's Transmission Infrastructure Program, began commercial operation Jan. 10, 2015, after energization of the final transformer at the Electrical District 5 Substation. TIP was established in 2009 through the American Recovery and Reinvestment Act to manage Western's \$3.25 billion borrowing authority to support projects facilitating the delivery of renewable resources in the western United States.

In this vein, ED5-to-Palo Verde directly helps 18 communities and tribes. It also increases transmission capacity to deliver renewable energy to consumers in Arizona, southern Nevada and southern California, adding enough capacity to power 30,000 homes. The 109-mile

transmission line, which provides 264 megawatts of transmission capacity, was completed on time and within budget. It connects a renewable-rich zone south of Phoenix, Arizona, with the Palo Verde market hub, a major electrical trading hub in the western United States.

Falcon-Amistad

The Falcon-Amistad Project consists of two international dams located on the Rio Grande River between Texas and Mexico. The United States and Mexico share and operate separate powerplants on each side of the Rio Grande River. The power output is divided evenly between the two nations. The State Department's International Boundary and Water Commission operates the U.S. portion of the projects.

Amistad Dam is located about 300 miles upstream from Falcon Dam. Amistad Powerplant was constructed by the U.S. Army Corps of Engineers, as agent for the IBWC. The United States' portion of construction, operation and maintenance was authorized by the Mexican-American Treaty Act of 1950. Amistad Powerplant has a generation capacity of 66,000 kilowatts. Construction began in 1960 and was completed in 1969. Its two generating units came online in 1983.

Project power is marketed to one cooperative in south Texas via Central Power and Light Company's transmission system. A total of 52 million kilowatt-hours of energy was delivered in FY 2015.

The five-year net generation average is 152 million kWh. Repayment is made through annual installments. Western received \$7 million in FY 2015. These installments are established in advance by Western and the customers on or before Aug. 31 of the year preceding the appropriate fiscal year. Each annual installment pays the amortized portion of the U.S. investment in the Falcon and Amistad hydroelectric facilities with interest, and associated operation, maintenance and administrative costs. This repayment schedule does not depend upon the amount of power and energy delivered or the amount of generation each year.

¹ CAP is included in sales and revenue data, but not reflected in financial statements for hydropower projects because Western does not have responsibility for CAP repayment.

Pacific Northwest-Southwest Intertie

The Pacific Northwest-Pacific Southwest Intertie was authorized by Section 8 of the Pacific Northwest Power Marketing Act of Aug. 31, 1964. Originally, the Intertie was envisioned to connect the Pacific Northwest with the Pacific Southwest with alternating-current and direct-current transmission line segments. As authorized, the overall project was to be a cooperative construction venture between federal and non-federal entities.

Due to delays in construction funding for the federal elements of the project, certain transmission line segments were postponed so much that interest from potential users waned. These events resulted in the delay of the AC line construction and the indefinite delay of the DC line construction. Consequently, the federal facilities that were constructed provide only AC transmission service.

Western's portion of the Intertie consists of two parts—a northern portion and a southern portion. The northern portion is administered by Western's Sierra Nevada region and is incorporated, for repayment and operational purposes, with the Central Valley Project.

Included in the northern portion is the California-Oregon Transmission Project, a 350-mile, 500-kilovolt line running from Caption Jack Substation near Malin, Oregon, to Tracy, California. Western is one of the COTP owners and has rights to 177 megawatts of the line's 1,600-MW capacity. When COTP was designed, plans included a 500-kV line between Los Banos and Gates substations in central California to mitigate grid congestion on Path 15. This section was not constructed at the time for many reasons, but was completed in November 2005 as the Los Banos-to-Gates No. 3 500-kV transmission line and provides the congestion relief. Western owns this 84-mile, 500-kV transmission line and 10 percent of the transmission system rights. Western's cost-recovery mechanism is contained in filings before the Federal Energy Regulatory Commission.

The southern portion is administered by Western's Desert Southwest region and is treated as a separate, stand-alone project for repayment and operational purposes. It consists of a 238-mile, 345-kV line from Mead Substation in Nevada to Liberty Substation in Arizona; a 19-mile, 230-kV line from Liberty to Westwing Substation in Arizona; a 22-mile, 230-kV line from Westwing to Pinnacle Peak Substation in Arizona; and two segments that came online in April 1996—the 260-mile, 500-kV Mead-to-Phoenix AC line between Marketplace Substation in Nevada and Perkins Substation in Arizona and the 202-mile, 500-kV Mead-to-Adelanto AC line between Marketplace and the existing Adelanto Substation in southern California.

Provo River

The Provo River Project was authorized in 1935. Construction on the project, which includes Deer Creek Dam and Powerplant on the Provo River in Utah, began in 1938 but, because of World War II, was not completed until 1951. The powerplant, authorized on Aug. 20, 1951, was completed and generation began in 1958. Its maximum operating capacity is 5,200 kilowatts.

Since 1994, Provo River Project power has been marketed by Western to Utah Municipal Power Agency, Utah Associated Municipal Power Systems and Heber Light and Power in the Provo River drainage. The customers purchase all power generation from the project and pay annual payments based upon the estimates of operation, maintenance and replacement expenses for the Deer Creek Powerplant. The payments are not dependent upon the power and energy made available for sale or the rate of generation each year. An estimate of actual expense is made at the end of the year and is included in the next year's payments.

The five-year generation average is 24 million kilowatt-hours. In Fiscal Year 2015, a total of 22 million kWh of energy was sold and a total of \$208,718 in related revenue was collected.

Provo River Project customers pay all operating, maintenance and replacement expenses of the project each year and, in return, receive all of the energy produced by the project.

Washoe

The Washoe Project in west-central Nevada and east-central California was designed to improve the regulation of runoff from the Truckee and Carson River system and to provide supplemental irrigation water and drainage, as well as water for municipal, industrial and fishery use. Additionally, it offers flood protection, fish and wildlife benefits and recreation.

The project was authorized by the Washoe Project Act of Aug. 1, 1956, and was constructed between 1960 and 1976, with the powerplant at the Stampede Dam added in 1986. Prosser Creek Dam, Marble Creek Dam and Pyramid Lake fishway are also part of the project. The powerplant at Stampede Dam has a maximum installed capacity of 3.6 megawatts.

Generation from the Stampede Powerplant is provided to the Truckee Donner Public Utility District and the City of Fallon pursuant to Contract No. 07-SNR-01026. This nonfirm energy is valued at 75 percent of the average monthly, current and previous years, Intercontinental Exchange Mid-C On/Off-Peak price. The revenue from sales is reduced by the project-use and station service power costs. The current rate case was published in the Federal Register on July 22, 2008 (73 FR 42565). Rate Schedule SNF-7 became effective Aug. 1, 2008, and its expiration was extended until Sept. 30, 2017. The Fiscal Year 2015 net generation was 3 million kilowatt-hours, compared to 10 million kWh in FY 2014.

¹ Reported as "Nevada Power Company" in FY 2014.

² Central Arizona sales of electric power are classified as 'other' in the combining power system statements of revenues and expenses and accumulated net revenues because Western is not responsible for CAP's repayment.

³ Power revenues as presented in this table are \$0.8 million less and \$3.4 million greater than the FY 2015 and FY 2014 sales of electric power presented in the statements of revenues and expenses and accumulated net revenues due to variances between revenue accrual estimates and actual revenues along with other miscellaneous transactions.

Powerplants

Central Arizona total				3	574	547	547	3,839	4,423

¹ Installed operating capacity is the maximum generating capability of the units' at-unity power factor without exceeding the specified heat rise on each unit and is independent of water constraints.

² Actual operating capability represents the operating capability on July 1, but may not represent the coincident or non-coincident peak operating capability for the powerplant, project or Western as a whole.

³ Net generation is gross plant generation less plant use. These amounts have not been reduced by other priorities such as project pumping energy.

⁴ Coal-fired powerplant.

⁵ United States' share (24.3 percent) of 2,250 MW plant capacity.

FALCON-AMISTAD

Powerplants

State/plant name	Operating agency	River	Initial in-service date	Existing number of units	Installed capacity ¹ FY 2015 (MW)	Actual operating capability (MW) ²		Net generation (GWh) ³	
						July 1, 2015	July 1, 2014	FY 2015	FY 2014
Texas									
Amistad ^{4, 5}	IBWC	Rio Grande	Jun 1983	2	66	66	50	48	76
Falcon ^{4, 5}	IBWC	Rio Grande	Oct 1954	3	32	32	8	4	41
Falcon-Amistad total				5	98	98	58	52	117

¹ Installed operating capacity is the maximum generating capability of the units' at-unity power factor without exceeding the specified heat rise on each unit and is independent of water constraints.

² Actual operating capability represents the operating capability on July 1, but may not represent the coincident or non-coincident peak operating capability for the powerplant, project or Western as a whole.

³ Net generation is gross plant generation less plant use. These amounts have not been reduced by other priorities such as project pumping energy.

⁴ United States' share (50 percent) of plant capacity.

⁵ Actual operating capability is based on average hourly generation for the month.

Operating agency:

IBWC - International Boundary Waters Commission, Department of State

Powerplants

State/plant name	Operating agency	River	Initial in-service date	Existing number of units	Installed capacity¹ FY 2015 (MW)	Actual operating capability (MW)²		Net generation (GWh)³	
						July 1, 2015	July 1, 2014	FY 2015	FY 2014
Utah									
Deer Creek	PRWUA	Provo	Feb 1958	2	5	5	5	22	18
Provo River total				2	5	5	5	22	18

¹ Installed operating capacity is the maximum generating capability of the units' at-unity power factor without exceeding the specified heat rise on each unit and is independent of water constraints.

² Actual operating capability represents the operating capability on July 1, but may not represent the coincident or non-coincident peak operating capability for the powerplant, project or Western as a whole.

³ Net generation is gross plant generation less plant use. These amounts have not been reduced by other priorities such as project pumping energy.

Operating agency:

PRWUA - Provo River Water Users Association

TERM DEFINITIONS

Customer, long-term

An entity that has an allocation and received a bill at least one month out of Fiscal Year 2015.

Long-term sales/revenue

Sales to, and revenue from, preference customers directly related to Western's marketing plans and its purchases of power to support those deliveries, plus custom product.

(Note: custom product is a combination of products and services, excluding provisions for load growth, which may be made available by Western per customer request, using the customer's base resource and supplemental purchases made by Western.)

Other sales/revenue

Sales or revenue not included in the long-term category—including all remaining short-term sales, regardless of whether or not they are firm, nonfirm, surplus, etc.

Pass-through cost sales/revenue

Sales or revenue that Western makes on behalf of its customers and for which Western passes through the full cost of those sales and the full benefit of that revenue, excluding custom product.
